Mount the volumes at the target host 1

Mount the volumes at the target host

[Previous: Break and delete replication peering.](#)

The volumes can now be mounted at the target host, based on the `/etc/fstab` file created before.

```
vm-pr1:~ # mount -a
```

The following output shows the required file systems.

```
vm-pr1:~ # df
Filesystem                                1K-blocks    Used
