# Workspace Management

A workspace consists of a desktop environment; this can be shared remote desktop sessions hosted on-premises or on any supported cloud environment. With Microsoft Azure, the desktop environment can be persistent with Windows Virtual Desktops. Each workspace is associated with a specific organization or client. Options available when creating a new workspace can be seen in the following figure.

New Workspace

Client & Settings Choose Applications Add Users Review & Provision

Select a Client [Add](#)

Filter by Keyword

No Clients Added.

Workspace Settings

Company Name

Primary Notification Email

Application Settings

- ☐ Enable Remote App
- ☐ Enable App Locker
- ☐ Enable Application Usage Tracking

Device Settings

- ☐ Disable Printing Access
- ☐ Enable Workspace User Data Storage

Security Settings

- ☐ Require Complex User Password
- ☐ Enable MFA for All Users
- ☐ Permit Access To Task Manager

Cancel Continue

Each workspace is associated with specific deployment.

Workspaces contain associated apps and app services, shared data folders, servers, and a WVD instance. Each workspace can control security options like enforcing password complexity, multifactor authentication, file audits, and so on.

Workspaces can control the workload schedule to power on extra servers, limit the number of users per server, or set the schedule for the resources available for given period (always on/off). Resources can also be configured to wake up on demand.

The workspace can override the deployment VM resource defaults if required. For WVD, WVD host pools (which contains session hosts and app groups) and WVD workspaces can also be managed from the cloud workspace management suite portal. For more info on the WVD host pool, see this [video](#).
