Host setup 1

Host setup

Previous: [SAP HANA storage connector API](#).

Before setting up the host, NetApp SAN host utilities must be downloaded from the [NetApp Support](#) site and installed on the HANA servers. The host utility documentation includes information about additional software that must be installed depending on the FCP HBA used.

The documentation also contains information on multipath configurations that are specific to the Linux version used. This document covers the required configuration steps for SLES 12 SP1 or higher and RHEL 7.2 or later, as described in the [Linux Host Utilities 7.1 Installation and Setup Guide](#).

Configure multipathing

Steps 1 through 6 must be executed on all worker and standby hosts in an SAP HANA multiple-host configuration.

To configure multipathing, complete the following steps:

1. Run the Linux `rescan-scsi-bus.sh -a` command on each server to discover new LUNs.
2. Run the `sanlun lun show` command and verify that all required LUNs are visible. The following example shows the `sanlun lun show` command output for a 2+1 multiple-host HANA system with two data LUNs and two log LUNs. The output shows the LUNs and the corresponding device files, such as LUN `SS3_data_mnt00001` and the device file `/dev/sdag`. Each LUN has eight FC paths from the host to the storage controllers.

```
stlrx300s8-6:~ # sanlun lun show
controller(7mode/E-Series)/
device          host          lun
vserver(cDOT/FlashRay)    lun-pathname
filename        adapter    protocol    size    product

- Run the `multipath -r` command to get the worldwide identifiers (WWIDs) for the device file names.

In this example, there are four LUNs.

```
stlrx300s8-6:~ # multipath -r

  |- 11:0:0:3 sdy 65:128 undef ready running
  `-- 11:0:2:3 sdae 65:224 undef ready running

```

4. Edit the `/etc/multipath.conf` file and add the WWIDs and alias names.

The example output shows the content of the `/etc/multipath.conf` file, which includes alias names for the four LUNs of a 2+1 multiple-host system. If there is no `multipath.conf` file available, you can create one by running the following command:
`multipath -T > /etc/multipath.conf.`

```

stlrx300s8-6:/ # cat /etc/multipath.conf
multipaths {
    multipath {
        wwid      3600a098038304436392b4d442d6f534f
        alias     hana- SS3_data_mnt00001
    }
    multipath {
        wwid      3600a098038304436375d4d442d753879
        alias     hana- SS3_data_mnt00002
    }
    multipath {
        wwid      3600a098038304436375d4d442d753878
        alias     hana- SS3_log_mnt00001
    }
    multipath {
        wwid      3600a098038304436392b4d442d6f5350
        alias     hana- SS3_log_mnt00002
    }
}

```

5. Run the `multipath -r` command to reload the device map.

6. Verify the configuration by running the `multipath -ll` command to list all the LUNs, alias names, and active and standby paths.

The following example output shows the output of a 2+1 multiple-host HANA system with two data and two log LUNs.

```
stlrx300s8-6:~ # multipath -ll

```

Create LVM volume groups and logical volumes

This step is only required if LVM is used. The following example is for 2+1 host setup using SID FC5.

For an LVM-based setup, the multipath configuration described in the previous section must be completed as well. In this example, eight LUNs must be configured for multipathing.

1. Initialize all LUNs as a physical volume.

```

pvcreate /dev/mapper/hana-FC5_data_mnt00001
pvcreate /dev/mapper/hana-FC5_data2_mnt00001pvcreate /dev/mapper/hana-
FC5_data_mnt00002
pvcreate /dev/mapper/hana-FC5_data2_mnt00002
pvcreate /dev/mapper/hana-FC5_log_mnt00001
pvcreate /dev/mapper/hana-FC5_log2_mnt00001pvcreate /dev/mapper/hana-
FC5_log_mnt00002
pvcreate /dev/mapper/hana-FC5_log2_mnt00002

```

2. Create the volume groups for each data and log partition.

```
vgcreate FC5_data_mnt00001 /dev/mapper/hana-FC5_data_mnt00001
/dev/mapper/hana-FC5_data2_mnt00001
vgcreate FC5_data_mnt00002 /dev/mapper/hana-FC5_data_mnt00002
/dev/mapper/hana-FC5_data2_mnt00002
vgcreate FC5_log_mnt00001 /dev/mapper/hana-FC5_log_mnt00001
/dev/mapper/hana-FC5_log2_mnt00001
vgcreate FC5_log_mnt00002 /dev/mapper/hana-FC5_log_mnt00002
/dev/mapper/hana-FC5_log2_mnt00002
```

3. Create a logical volume for each data and log partition. Use a stripe size that is equal to the number of LUNs used per volume group (in this example, it is two) and a stripe size of 256k for data and 64k for log. SAP only supports one logical volume per volume group.

```
lvcreate --extents 100%FREE -i 2 -I 256k --name vol FC5_data_mnt00001
lvcreate --extents 100%FREE -i 2 -I 256k --name vol FC5_data_mnt00002
lvcreate --extents 100%FREE -i 2 -I 64k --name vol FC5_log_mnt00002
lvcreate --extents 100%FREE -i 2 -I 64k --name vol FC5_log_mnt00001
```

4. Scan the physical volumes, volume groups, and vol groups at all other hosts.

```
modprobe dm_modpvscanvgscanlvscan
```

If these commands do not find the volumes, a restart is required.

To mount the logical volumes, the logical volumes must be activated. To activate the volumes, run the following command:

```
vgchange -a y
```

Create file systems

To create the XFS file system on each LUN belonging to the HANA system, take one of the following actions:

- For a single-host system, create the XFS file system on the data, log, and **/hana/shared** LUNs.

```
stlrx300s8-6:/ # mkfs.xfs /dev/mapper/hana- SS3_data_mnt00001
stlrx300s8-6:/ # mkfs.xfs /dev/mapper/hana- SS3_log_mnt00001
stlrx300s8-6:/ # mkfs.xfs /dev/mapper/hana- SS3_shared
```

- For a multiple-host system, create the XFS file system on all data and log LUNs.

```
stlrx300s8-6:~ # mkfs.xfs /dev/mapper/hana- SS3_log_mnt00001
stlrx300s8-6:~ # mkfs.xfs /dev/mapper/hana- SS3_log_mnt00002
stlrx300s8-6:~ # mkfs.xfs /dev/mapper/hana- SS3_data_mnt00001
stlrx300s8-6:~ # mkfs.xfs /dev/mapper/hana- SS3_data_mnt00002
```

- If LVM is used, create the XFS file system on all data and log logical volumes.

```
mkfs.xfs FC5_data_mnt00001-vol
mkfs.xfs FC5_data_mnt00002-vol
mkfs.xfs FC5_log_mnt00001-vol
mkfs.xfs FC5_log_mnt00002-vol
```

The multiple host example commands show a 2+1 multiple-host HANA system.

Create mount points

To create the required mount point directories, take one of the following actions:

- For a single-host system, set permissions and create mount points on the database host.

```
stlrx300s8- 6:/ # mkdir -p /hana/data/SS3/mnt00001
stlrx300s8- 6:/ # mkdir -p /hana/log/SS3/mnt00001
stlrx300s8- 6:/ # mkdir -p /hana/shared
stlrx300s8- 6:/ # chmod -R 777 /hana/log/SS3
stlrx300s8- 6:/ # chmod -R 777 /hana/data/SS3
stlrx300s8-6:/ # chmod 777 /hana/shared
```

- For a multiple-host system, set permissions and create mount points on all worker and standby hosts.

The example commands show a 2+1 multiple-host HANA system.

```
stlrx300s8- 6:/ # mkdir -p /hana/data/SS3/mnt00001
stlrx300s8- 6:/ # mkdir -p /hana/log/SS3/mnt00001
stlrx300s8- 6:/ # mkdir -p /hana/data/SS3/mnt00002
stlrx300s8- 6:/ # mkdir -p /hana/log/SS3/mnt00002
stlrx300s8- 6:/ # mkdir -p /hana/shared
stlrx300s8- 6:/ # chmod -R 777 /hana/log/SS3
stlrx300s8- 6:/ # chmod -R 777 /hana/data/SS3
stlrx300s8-6:/ # chmod 777 /hana/shared
```

The same steps must be executed for a system configuration with Linux LVM.

Mount file systems

To mount file systems during system boot using the `/etc/fstab` configuration file, complete the following steps:

- For a single-host system, add the required file systems to the `/etc/fstab` configuration file.

The XFS file systems for the data and log LUNs must be mounted with the `relatime` and `inode64` mount options.

```
stlrx300s8-6:/ # cat /etc/fstab
/dev/mapper/hana- SS3_shared /hana/shared xfs defaults 0 0
/dev/mapper/hana- SS3_log_mnt00001 /hana/log/SS3/mnt00001 xfs
relatime,inode64 0 0
/dev/mapper/hana- SS3_data_mnt00001 /hana/data/SS3/mnt00001 xfs
relatime,inode64 0 0
```

If LVM is used, use the logical volume names for data and log.

```
# cat /etc/fstab
/dev/mapper/hana-FC5_shared /hana/shared xfs defaults 0 0
/dev/mapper/FC5_log_mnt00001-vol /hana/log/FC5/mnt00001 xfs
relatime,inode64 0 0
/dev/mapper/FC5_data_mnt00001-vol /hana/data/FC5/mnt00001 xfs
relatime,inode64 0 0
```

- For a multiple-host system, add the `/hana/shared` file system to the `/etc/fstab` configuration file of each host.

All the data and log file systems are mounted through the SAP HANA storage connector.

```
stlrx300s8-6:/ # cat /etc/fstab
<storage-ip>:/hana_shared /hana/shared nfs rw,vers=3,hard,timeo=600,
intr,noatime,nolock 0 0
```

To mount the file systems, run the `mount -a` command at each host.
